

It's the Law!

Starting in January 2010, electronics manufacturers will be responsible for the collection and recycling of electronics from households and K-12 public schools across Wisconsin.

Wisconsin's electronics recycling law is expected to provide residents and schools with more convenient recycling locations across the state, reduce pollution from improper disposal of electronics and encourage an expansion of the recycling industry within Wisconsin.

Effective September 1, 2010 Landfill Ban Includes:

- **Computers**
- **Monitors**
- **Televisions and other video display devices**
- **Fax machines**
- **DVD and VCR players**
- **Printers**
- **Cell Phones**

What Does the New Law Do?

- Prohibits the disposal of various electronic devices such as: computers, monitors, printers, televisions, VCRs, DVD players, and cell phones.
- Requires manufacturers to collect or contract with others to collect eligible electronic devices (EEDs) from households and K-12 public schools.
- Provides an incentive to collect electronics from rural counties.

Why Recycle Electronics?

Computers, computer accessories, TVs, cell phones and other electronics contain harmful materials including lead, mercury, cadmium, chromium, other heavy metals and chemical flame retardants. When thrown in the landfill, incinerated or illegally dumped, these chemicals can leach into the environment, where they may affect human and environmental health. Improperly discarded electronics may also pose health risks to workers from companies that manage the electronics.

It is also important to recycle electronics because of the valuable reusable materials they contain, including plastics, metals, circuit boards and others. Recycling or reusing these materials reduces environmental impacts and economic costs by reducing the need for virgin materials in producing new electronics.

Business E-Waste Collectors

State hazardous waste regulations prohibit businesses from disposing electronics in the landfill.
